1. Motor characteristic values reported in the tables refer to continuous duty (S1), voltage 3~400V 50 Hz, ambient temperature max. 40 °C, altitude up to 1000 m above sea level operating condition. These are two speed motors and they are exempt from efficiency requirements of the regulation (UE) 2019/1781 - Article 2 (2) point n). The values indicated refer to the functioning of the motor with an alimentazione 3~400V 50 Hz, external temperature max 40 °C, altitude up to 1000 m s.l.m., continuous service (S1). These are two speed motors and they are exempt from efficiency requirements of the regulation (UE) 2019/1781 - Article 2 (2) point n).

2. DC brake is provided on request only, on BA series motors. Brake current consumption values refer to a rated voltage of 3-phase 400V 50 Hz for AC brakes and single-phase 230V for DC brakes. - Il freno D.C. per la serie BA viene fornito solo su richiesta. I valori della corrente assorbita dal freno si intendono alla tensione nominale di 400V 50 Hz trifase per il freno AC e 230V monofase lato alternata per il freno DC.

3. The table shows the sound pressure noise level, measured at one metre range from the motor according to the Acurve (ISO 1680). The shown noise levels refer to motor no-load operating condition and should be re-

garded with a tolerance of ± 3dB. I valori di rumorosità si intendono a regime espresso in pressione sonora, misurati ad un metro di distanza dal motore e ponderati secondo la curva A (ISO 1680). La tolleranza sul valore indicato è di 3 dB.

4. Max brake torque and Z₀ values refer to AC brake. I valori di coppia frenante massima e Z₀ si riferiscono al freno AC.

5. The expressed Z₀ values refers to AC Brake. Z₀ is the max number of no-load starts. It is meant for calculation purposes only, and is used to obtain the max number of starts with load. The number of starts with load (Z_{load}) is indicative and it has to be operatively tested for confirmation. The use of thermal protectors is strongly recommended when the operative number of starts is close to the calculated Z_{load}. It is necessary to verify the max permissible brake energy dissipation for heavy applications with the high moment of inertia and the max permissible RPM.

I valori Z₀ si riferiscono al freno AC. Questo valore indica il numero massimo di avviamenti orari a vuoto e deve servire solo come dato di calcolo per ottenere il numero massimo di avviamenti a carico. Il numero ottenuto dal calcolo è indicativo e deve necessariamente essere soggetto a verifica

operativa. Se il numero di avviamenti orari a carico è prossimo al valore Z_{load} ottenuto dal calcolo si consiglia l'adozione di termostoprotettori. Per applicazioni gravose con elevati momenti d'inerzia è necessario effettuare una verifica sulla massima energia dissipabile dal gruppo freno e sulla massima velocità di rotazione del motore consentita.

6. The maximum brake torque for BAHDA 132 motors series is 120 Nm.

La massima coppia frenante per un motore BAHDA 132 è di 120 Nm.

7. MGM keeps the data provided as up-to-date and correct as possible. Since the products are subject to changes and improvements, the data indicated cannot be considered binding. The data indicated must also be understood as being general in nature. For specific applications, please contact the MGM staff. La MGM motori elettrici SpA si adopera per mantenere i dati forniti il più possibile aggiornati e corretti. Dal momento che i prodotti sono oggetto di continue modifiche e miglioramenti i dati indicati non possono tuttavia essere considerati impegnativi. I dati indicati inoltre si devono intendere come informazioni di carattere generale sul prodotto. Per specifiche applicazioni Vi raccomandiamo di contattare lo staff della MGM.

1. Motor characteristic values reported in the tables refer to continuous duty (S1), voltage 3~400V 50 Hz, ambient temperature max. 40 °C, altitude up to 1000 m above sea level operating condition. These are two speed motors and they are exempt from efficiency requirements of the regulation (UE) 2019/1781 - Article 2 (2) point n). The values indicated refer to the functioning of the motor with power supply 3~400V 50 Hz, external temperature max 40 °C, altitude up to 1000 m.s.l.m., continuous service (S1). These are two speed motors and they are exempt from efficiency requirements of the regulation (UE) 2019/1781 - Article 2 (2) point n).

2. DC brake is provided on request only, on BA series motors. Brake current consumption values refer to a rated voltage of 3-phase 400V 50 Hz for AC brakes and single-phase 230V for DC brakes. - The DC brake, for the BA series, is provided only on request. The values of the current absorbed by the motor refer to the voltage nominal of 400V 50 Hz trifase per DC motor and it is intended to the tension nominal of 230V monofase lato alternata per the DC motor.

3. The table shows the sound pressure noise level, measured at one metre range from the motor according to the Acurve (ISO 1680). The shown noise levels refer to motor no-load operating condition and should be re-

garded with a tolerance of ± 3dB. The values of noise level are intended to a regime expressed in sound pressure, measured at a distance of one meter from the motor and its weight according to the curve A (ISO 1680). The tolerance on the value indicated is ± 3dB.

4. Max brake torque and Z₀ values refer to AC brake. The values of the couple maximum and Z₀ refer to AC Brake. Z₀ is the number of no-load starts.

It is meant for calculation purposes only, and is used to obtain the maximum number of starts with load. The number of starts with load (Z_{load}) is indicative and it has to be operatively tested for confirmation. The use of thermal protectors is strongly recommended when the operative number of starts is close to the calculated Z_{load}. It is necessary to verify the maximum permissible brake energy dissipation for heavy applications with the high moment of inertia and the maximum permissible RPM.

The values of Z₀ refer to the AC brake. This value indicates the maximum number of starts at a given speed and torque. The value obtained from the calculation is indicative and must be verified by the user.

5. The expressed Z₀ values refer to AC Brake. Z₀ is the maximum number of no-load starts. It is meant for calculation purposes only, and is used to obtain the maximum number of starts with load. The number of starts with load (Z_{load}) is indicative and it has to be operatively tested for confirmation. The use of thermal protectors is strongly recommended when the operative number of starts is close to the calculated Z_{load}. It is necessary to verify the maximum permissible brake energy dissipation for heavy applications with the high moment of inertia and the maximum permissible RPM.

6. The maximum brake torque for BAHDA 132 motors series is 120 Nm. The maximum couple of the motor BAHDA 132 is 120 Nm.

1. Motor characteristic values reported in the tables refer to continuous duty (S1), voltage 3-400V 50 Hz, ambient temperature max. 40 °C, altitude up to 1000 m above sea level operating condition. These are two speed motors and they are exempt from efficiency requirements of the regulation (UE) 2019/1781 - Article 2 (2) point n). The values indicated refer to the functioning of the motor with alimentazione 3-400V 50 Hz, temperature esterna max 40 °C, altitude fino a 1000 m s.l.m., servizio continuo (S1). Questi sono motori a due velocità e sono esenti dai requisiti di efficienza del regolamento (UE) 2019/1781 - Articolo 2 (2) punto n).

2. DC brake is provided on request only, on BA series motors. Brake current consumption values refer to a rated voltage of 3-phase 400V 50 Hz for AC brakes and single-phase 230V for DC brakes. - Il freno D.C. per la serie BA viene fornito solo su richiesta. I valori della corrente assorbita dal freno si intendono alla tensione nominale di 400V 50 Hz trifase per il freno AC e 230V monofase lato alternata per il freno DC.

3. The table shows the sound pressure noise level, measured at one metre range from the motor according to the Acurve (ISO 1680). The shown noise levels refer to motor no-load operating condition and should be re-

garded with a tolerance of ± 3dB. I valori di rumorosità si intendono a regime espresso in pressione sonora, misurati ad un metro di distanza dal motore e ponderati secondo la curva A (ISO 1680). La tolleranza sul valore indicato è di 3 dB.

4. Max brake torque and Z₀ values refer to AC brake. I valori di coppia frenante massima e Z₀ si riferiscono al freno AC.

5. The expressed Z₀ values refers to AC Brake. Z₀ is the max number of no-load starts. It is meant for calculation purposes only, and is used to obtain the max number of starts with load. The number of starts with load (Z_{load}) is indicative and it has to be operatively tested for confirmation. The use of thermal protectors is strongly recommended when the operative number of starts is close to the calculated Z_{load}. It is necessary to verify the max permissible brake energy dissipation for heavy applications with the high moment of inertia and the max permissible RPM.

I valori Z₀ si riferiscono al freno AC. Questo valore indica il numero massimo di avviamenti orari a vuoto e deve servire solo come dato di calcolo per ottenere il numero massimo di avviamenti a carico. Il numero ottenuto dal calcolo è indicativo e deve necessariamente essere soggetto a verifica

operativa. Se il numero di avviamenti orari a carico è prossimo al valore Z_{load} ottenuto dal calcolo si consiglia l'adozione di termostoprotettori. Per applicazione gravose con elevati momenti d'inerzia e necessario effettuare una verifica sulla massima energia dissipabile dal gruppo freno e sulla massima velocità di rotazione del motore consentita.

6. The maximum brake torque for BAHDA 132 motors series is 120 Nm. La massima coppia frenante per un motore BAHDA 132 è di 120 Nm.

7. MGM keeps the data provided as up-to-date and correct as possible. Since the products are subject to changes and improvements, the data indicated cannot be considered binding. The data indicated must also be understood as being general in nature. For specific applications, please contact the MGM staff. La MGM motori elettrici SpA si adopera per mantenere i dati forniti il più possibile aggiornati e corretti. Dal momento che i prodotti sono oggetto di continue modifiche e miglioramenti i dati indicati non possono tuttavia essere considerati impegnativi. I dati indicati inoltre si devono intendere come informazioni di carattere generale sul prodotto. Per specifiche applicazioni Vi raccomandiamo di contattare lo staff della MGM.
